

Fieldwork
redefined

An aerial photograph of a vast mangrove forest. The landscape is a complex network of winding, light-colored water channels that meander through dense, vibrant green vegetation. The water appears slightly turbid, likely due to the presence of organic matter from the forest. The overall scene is a rich, textured expanse of natural beauty.

Forests, like the **Amazonia**, play a critical role
in climate, biodiversity,
and economic sustainability.

Annually, **15 billion** trees
cut down - over 3 times
the size of Switzerland.

Switzerland - **one-third**
covered by forest

The Jura is particularly densely forested ~41%
